

Class Project Phase I: CSE 460

Group 6

Contributors: Leheng Chen, Alexa Quijano

- 1) For this question, refer to “Module1_Case_Study_Usecases and the usecase diagram.pdf” posted under module 1 for level of details expected.

List of actors (Briefly describe the role of each actor):

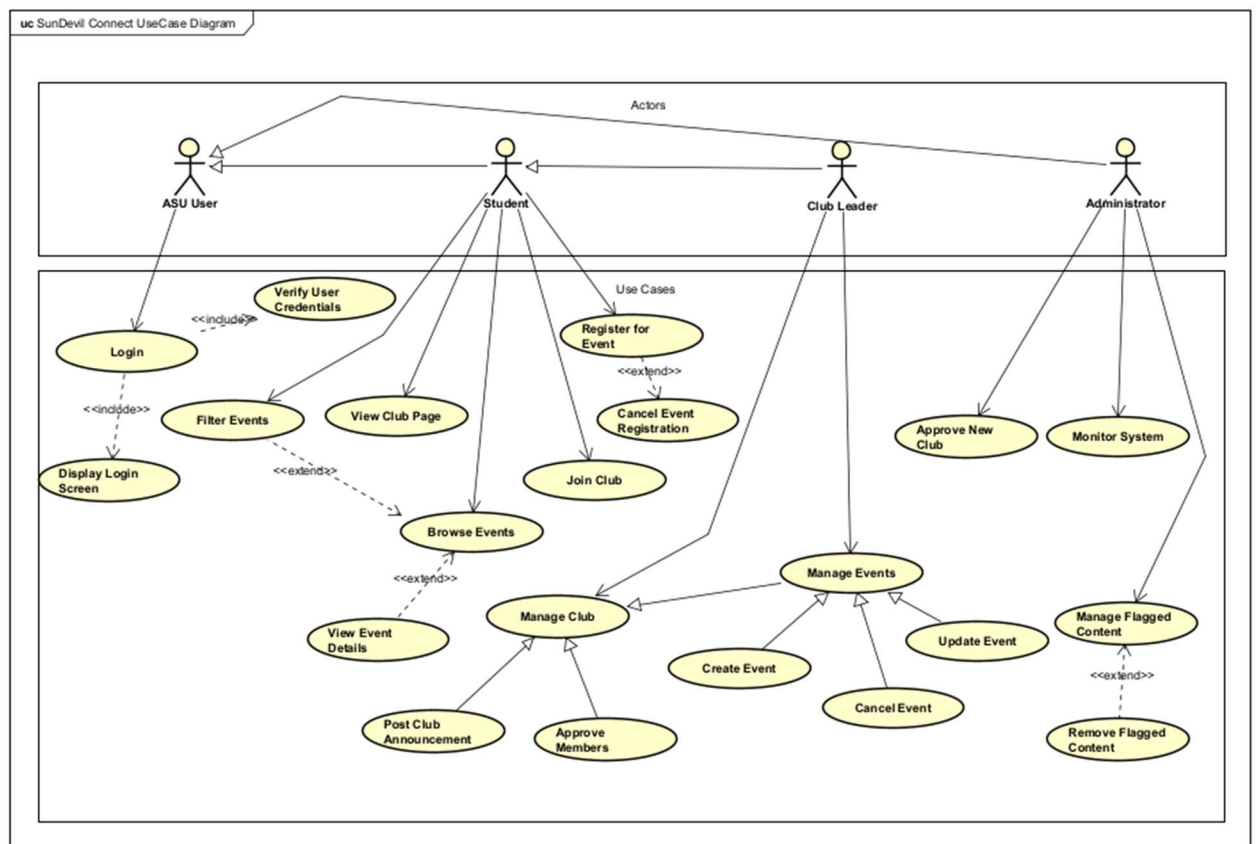

Actor	Role
ASU User	General role representing an authenticated person with an ASU account.
Student	Browses events and clubs, registers for events, joins clubs, and receives updates.
Club Leader	Specialized student who manages a club dashboard, events, members, and announcements.
Administrator	Oversees clubs and content, approves new clubs, and manages flagged or unsafe content.

List of use cases (Describe each use case)

Use Case	Primary Actor(s)	Description
Login	Student, Club Leader, Administrator	Allows users to securely log in and access features based on their role.
Display Login Screen	Student, Club Leader, Administrator	The system displays the login screen for the user to enter credentials.
Verify User Credentials	Student, Club Leader, Administrator	The system checks the entered credentials and grants access to the correct role if valid.
Browse Events	Student	The student views upcoming campus events sorted by category such as music, tech, sports, social, and career.
Filter Events	Student	The student narrows event results by date, location, category, popularity, and free/paid status.
View Event Details	Student	The student opens an event page to see description, host club, time, location, capacity, fee, and registration status.
Register for Event	Student	The student signs up for an event they want to attend.
Cancel Event Registration	Student	The student cancels an existing event registration.
View Club Page	Student	The student views club description, leaders, events, members, and announcements.
Join Club	Student	The student requests membership in a club they are interested in.
Manage Club	Club Leader	The leader manages club information and oversees club activities.
Manage Events	Club Leader	The leader creates, updates, or cancels events for their club.

Create Event	Club Leader	The leader creates and schedules a new event for club members.
Update Event	Club Leader	The leader edits details of an existing event.
Cancel Event	Club Leader	The leader cancels an existing club event.
Approve Members	Club Leader	The leader reviews pending membership requests and approves or rejects them.
Post Club Announcement	Club Leader	The leader posts updates and important information for members.
Approve New Club	Administrator	The administrator reviews and approves new clubs before they become active.
Manage Flagged Content	Administrator	The administrator reviews content that may violate platform rules.
Remove Flagged Content	Administrator	The administrator removes flagged content when it violates platform rules.
Monitor System	Administrator	The administrator oversees system activity and verifies that the platform is operating correctly.

- 2) Copy and paste your use case diagram here. The Use case diagram need to have includes, extends, and generalization relationships that properly identify relationship among use cases. Refer to “Module1_Case_Study_Usecases and the usecase diagram.pdf” posted under module 1 and the Sun Devil case study example for level of details expected

3) List of objects and their classification (Module 3 and 4 covers topics related to objects and their classification)

Object/Class	Classification	Responsibility
LoginPage	Boundary/UI	Collects credentials and displays sign-in errors or success.
EventSearchPage	Boundary/UI	Shows event list, filters, and search results.
EventDetailsPage	Boundary/UI	Shows event details and registration controls.
ClubPage	Boundary/UI	Shows club profile, members, events, and announcements.
ClubDashboardPage	Boundary/UI	Leader interface for club management tasks.
AdminPanelPage	Boundary/UI	Admin interface for approvals and moderation.
AuthController	Control	Coordinates sign-in and authorization checks.
EventController	Control	Coordinates event search, registration, cancellation, and waitlist logic.
ClubController	Control	Coordinates club pages, membership requests, approvals, and announcements.
AdminController	Control	Coordinates admin approval, review, and suspension actions.
User	Entity	Base account information shared by system users.
Student	Entity	Student profile and engagement behavior.
ClubLeader	Entity	Student with leader privileges for one or more clubs.
Administrator	Entity	Administrative user with oversight permissions.
Club	Entity	Student organization profile, status, events, members, and announcements.
ClubMembership	Entity	Membership relationship between a student and club.
Event	Entity	Campus event details, capacity, fee, and status.
EventRegistration	Entity	Student registration record for an event.
Announcement	Entity	Club update shown on club pages and sent to members.
FlaggedContent	Entity	Moderation report reviewed by admins.

Copy and paste your class diagram here . All the classes in the class diagram should have related methods and attributes (In phase II, we will further refine this initial class diagram, but key attributes and methods need to be identified in part I)
